After writing the first functional web app, I got hooked to programming and never stopped learning since. The satisfaction I get when the app is doing what I intended it to do keeps me enthusiastic to work, learn and experiment more.

Languages

C# (ASP.NET)
JavaScript, TypeScript
HTML, CSS, SCSS
MSSQL

Frameworks

Entity framework
Angular, React, Redux
jQuery
Bootstrap

Other

Webpack
Git
Azure
npm, yarn

Personal projects/Experience

My Wallet – Finance tracker  °Live	Movie database web app  °Live
This web app is used for managing and tracking personal finances and budget. The backend is built using ASP.NET WebApi and the frontend is built with Angular framework. JSON web tokens are used to authorize web requests. stack: ASP.NET WebApi, Entity framework, Angular, MSSQL, Bootstrap.	This is a web app that uses a database populated with about 250 movies. ASP.NET MVC pattern is used for development. The user first needs to login to get complete access to the website. Search movies, like, comment, add to watchlist are implemented for all users, while update and delete operations are reserved for certain roles. stack: ASP.NET MVC, jQuery, Ajax, MSSQL.
Important Serbian localities  °Live	Blackjack game  °Live
This app uses some backend with Python. It gives user the ability to search for Serbian cultural monuments and display their location, additional info and route to the monument on the map. stack: React, Ajax, Bootstrap, Python-flask, SQLite	Based on classical casino game, the whole game logic was developed from scratch using React.js and Redux . stack: React, Redux, ES6, SCSS, HTML, Webpack.
